

## Nurturing Creativity in Education: Restoring Power

A good classroom environment always has some elements of creativity which makes the lessons more interesting and interactive. The right mix of creativity along with curriculum helps students to be innovative and also encourages them to learn new things.

6 organizations from UK, TR, IR, IT, NR, ML have come together to form a strategic partnership that will empower schools to pursue creative education with their young people.

3 Transnational Project Meetings, 6 multiplier events and 3 LTT meetings will be held during the 24 months' period. Moreover 4 Intellectual Outputs (Guidance, MOOC, Handbook and Toolkit) will be developed and carried out during the project period.

The target groups of the project are students, teachers,

headmasters and trainers. With this project we aim to form long lasting, sustainable results. We carefully planned what is needed to develop creativity at schools. In order to assure sustainability of this, it is inevitable to include parents, principals and school staff, not only students and teachers.

The first transnational meeting was held in Malta with the participation of Malta, UK, Turkey and Norway. Italian or Irish teams joined the meeting online. In this first meeting all the work to be done throughout the project was discussed.

*“Creativity in education is valuable more than ever due to COVID circumstances. It helps build a solid connection between different skills and cognitive complexity. Skills development always been one of the positive approaches that RJ4ALL focuses”*

Dr. Theo Gavrielides, RADEX coordinator and RJ4All Founder and Director
